Osteopathy

Osteopathy is a system of treating diseases by perfectly adjusting all parts of the body, thus giving the blood and nerve supply their natural liberty to carry on life.

It assumes, as a working basis, that God, in constructing the human body, was a workman capable of making a machine that will work, and until worn out will continue to work so long as all parts are kept in perfect order; and that when it fails to work some part is out of order.

This common sense you apply to your harvester, sewing machine and watch. Why not apply it to your body? Your harvester, sewing machine or watch will not run with parts bent or displaced. Why, any more, should your body work properly with a rib or vertebrae displaced; a muscle or ligament contracted or thickened? Is it not evident how the blood and nerve supply, the two agents on which every cell of the body depends for its life and activity, may be deranged? The cells not working properly, what of the organs composed of the cells? Do you realize why millions of medicine have failed to cure you? A little thinking here, with a little common sense will change your idea of disease and its cure.

The Osteopaths, with two years of hardest study, with one year of apprenticeship, is sent out as the skilled machinist to detect and restore the displaced structures. When, if the working basis, God's ability to construct a capable machine, be true, the body will be in working order. Contemplate.
